

## Features and Benefits

- **All-welded, unibody construction**

Cabinets are welded into single, integral units with turned-in seams for super rigidity. Doors and walls are double wall, insulated, heavy gauge stainless steel construction.

- **Ergonomic latches**

Flush-mounted sliding door latches assure positive closure and durability on banquet refrigerators; easy-open edgemount latch with magnetic latch on Air Screen.

- **Full-perimeter bumpers**

High impact resistant, non-marking vinyl bumpers are set into heavy-duty aluminum frames with reinforced corners. Fully protect walls and cabinets from damage.

- **Offset, heavy-duty casters**

Polyurethane tread casters are plate mounted and bolted to the base frame in an offset "wheel-ahead" pattern for easy movement over thresholds and other uneven surfaces, and to protect the cabinet and its contents.

- **Sanitary**

Carter-Hoffmann mobile refrigerators feature stainless steel interior walls with lapped corners to prevent food from collecting and make cleaning easy!

## Mobile Refrigerators

The ultimate in refrigerated food transport. Maintain food quality at safe temperature with maximum energy efficiency.

- Higher food quality and safety by providing on-site refrigerated holding for banquets, catered events, on tray lines and more
- Increased tray make-up efficiency in volume feeding
- Instant backup capacity in buffets and cafeterias

## Banquets and Catering

### Heavy-Duty Mobile Refrigerators

- Heavy-duty features for rugged transport across the facility or across town
- Single and two door refrigerators
- Channel slides for 18x26 sheet pans or adjustable universal slides for 12x20 and 18x26 pans

Model	12x20 pans	18x26 pans	Doors
PHB480HE	24	12	1
PHB975HE	48	24	2
PHB450HE	-	30	1
PHB650HE	-	60	2

PHB450HE

## Healthcare Tray Lines

### Air Screen Refrigerator

- Cross flow air screen keeps interior cold with the door open for up to 2 hours
- No-tip tray slides, so you can pull out the trays part way for easy access
- Digital control with automatic defrost

Model	18x26 pans	13x18 pans	Doors
PHB495HE	12	24	1

PHB495HE

## Built to Move... Built to Last

Refrigerators designed to operate in a stationary position can't handle frequent moving. Their refrigeration components are highly vulnerable to shock and vibration. And simply adding wheels won't do it. Carter-Hoffmann's unique construction technique uses special, heavy-duty components, mounted into the cabinet and frame and welded into a single integral unit built to withstand the rigors of transport.

### A higher level of performance

Carter-Hoffmann mobile refrigerators employ a high efficiency blower refrigeration system that provides consistent, even air flow. This system assures quick "pull-down" to operating temperature and quick recovery during heavy use. And our Air Screen tray line refrigerator's unique cross-flow air allows the door to be kept open for up to two hours during patient tray make-up. All of our refrigerators meet the efficiency standard\* of the Department of Energy.

### Take them outside

Not only are they mobile, they can be taken anywhere you serve. With heavy-duty casters and a wrap-around bumper, they're ready to roll. Need to tow them? Two door refrigerators can be outfitted with a towing package. Need to use them outdoors in the heat? Not to worry! They have polyiso insulation to keep your foods cool in ambient temperatures up to 105°F (40°C).

\*Equipped with an energy management system to meet the standards of the US Department of Energy Meets DOE 10 CFR 431 Subpart C-Commercial Refrigerators, Freezers and Refrigerators-Freezers Standard.
